Footnotes

¹ Generation and Avoided CO₂ is 100% of each project

² Avoided CO₂ based on the EPA's Avoided Emissions and Generation Tool (AVERT) v4.3 data released April 2024 and are specific to onshore wind generation in the Northwest in the year of generation

AVERT avoided emission rate data retrieved from: <https://www.epa.gov/avert/avoided-emission-rates-generated-avert>

³ 100% of generation. The share of production for repowering only has not been separated from the rest of the facility, since the energy delivered to the network solely from repowering cannot be separated and is measured from the date the last turbine was placed in service

⁴ Electric Transmission project built to facilitate the interconnection of renewable generation
