

JUST THE **FACTS**

BHE PIPELINE GROUP

MILES OF PIPELINE	21,000
TOTAL DESIGN CAPACITY	Approximately 21.1 billion cubic feet per day
STORAGE FACILITIES	22
STATES WITH ASSETS	27

MARK A. HEWETT
President and CEO

BHE Pipeline Group is comprised of Berkshire Hathaway Energy’s interstate natural gas companies, Kern River Gas Transmission Company, Northern Natural Gas Company and BHE GT&S. Together, the businesses operate approximately 21,000 miles of pipeline with a design capacity of approximately 21.1 billion cubic feet of natural gas per day. BHE Pipeline Group also operates 20 natural gas storage facilities with a total working gas capacity of 511.4 billion cubic feet and liquified natural gas facilities, including the Cove Point LNG export, import and storage facility on the East Coast.

- Kern River’s 1,400-mile system is a direct link between the Rocky Mountain natural gas-producing basins and western markets, including Salt Lake City, Utah; Las Vegas, Nevada; and Southern California.
- Northern Natural Gas’ 14,200-mile system extends from the Permian Basin in southwest Texas to Michigan’s Upper Peninsula. Northern Natural Gas has three underground natural gas storage facilities and two liquified natural gas storage peaking units that together have a total working gas capacity of 95.6 billion cubic feet and approximately 2.2 billion cubic feet per day of peak delivery capability.
- BHE GT&S operates a 5,400-mile natural gas transmission system between New York and northern Georgia, one of the nation’s largest underground natural gas storage systems and a natural gas liquids processing business. Its liquified natural gas solutions through Pivotal LNG and a 75% operating stake in Cove Point LNG provide a cleaner energy alternative for many industries within the U.S. and across the globe.
- In 2023, BHE Pipeline Group transported approximately 15% of the total natural gas consumed in the U.S. with an aggregate compression reliability rate of 99.99%.

COMMITMENT TO CUSTOMER SATISFACTION

- BHE Pipeline Group is committed to providing customers with outstanding service and value, and pledges to work with efficiency, honesty and integrity and in the best interest of customers – always.
- In Mastio and Company’s 28th Edition customer satisfaction survey, which covers the 2023 survey year, BHE Pipeline Group had the four highest-ranked pipelines with Kern River ranked No. 1, Carolina Gas Transmission ranked No. 2, Northern Natural Gas ranked No. 3, and Eastern Gas Transmission and Storage ranked No. 4 among the 37 interstate pipelines included in the survey. A BHE Pipeline Group company has held the No. 1 and No. 2 ranking for the last 15 years of the survey.
- BHE Pipeline Group has been ranked No. 1 in the Major Organizational Group category for 19 consecutive years. Northern Natural Gas has been ranked No. 1 in the Mega Pipeline Group category for 16 consecutive years. In the Regional Pipeline category, Kern River has been ranked No. 1 for 14 consecutive years, and Carolina Gas Transmission has been ranked No. 2 for the fourth consecutive year.

PROVIDING VALUE TO CUSTOMERS

- Northern Natural Gas’ extensive footprint provides access to multiple supply basins that allow customers to obtain diverse supplies of natural gas at competitive prices. Its exceptionally reliable transportation service, industry leading customer satisfaction, operational flexibility and storage capability distinguish Northern Natural Gas from its competitors in the markets it serves.
- BHE GT&S’ natural gas transmission operations compete with domestic and Canadian pipeline companies. The combination of reliable and flexible services, access to highly liquid and attractive pricing locations, significant storage capability, availability of numerous receipt and delivery points along its pipeline system and capacity rights held on third-party pipelines enables BHE GT&S to tailor its services to meet the needs of individual customers.
- Kern River is the only interstate pipeline that presently delivers natural gas directly from the Rocky Mountain gas supply region to end-users in Southern California. Kern River receives about 25% of Rockies natural gas supply and its deliveries meet approximately 25% of California’s natural gas demand.

ENVIRONMENTAL RESPECT AND STEWARDSHIP

- BHE Pipeline Group maintains a vigilant focus on methane emissions reduction, with a commitment to aerial and ground leak detection surveys, equipment maintenance and repairs, and avoided methane emissions. Because of this ongoing commitment, BHE Pipeline Group’s 2023 combined leak rate of 0.027% was 69% lower than the 0.088% emissions rate of the natural gas industry’s transmission and storage segments.
- Cove Point LNG, the first liquefied natural gas export facility on the East Coast, reached a milestone at the end of December 2023, loading its 400th commercial cargo since exporting began in 2018. Since that time, exports have reached 30 countries around the world, helping reduce global reliance on coal, oil and other carbon-intensive energy sources.
