President and CEO
Rocky Mountain Power

- PacifiCorp serves 2 million customers through its two divisions:
 - Rocky Mountain Power serves customers in Utah, Wyoming and Idaho.
 - Pacific Power serves customers in Oregon, Washington and California.
- PacifiCorp owns and operates the largest grid in the western U.S. with 17,100 miles of transmission lines across 10 western states.
- The company owns and operates a diverse portfolio of generation resources including 73 generation facilities in eight states – comprised of coal, natural gas, hydroelectric, solar, geothermal and the largest owned wind fleet by a regulated utility in the Western U.S.
- PacifiCorp owns and manages 46,000 acres of lands reserved for wildlife habitat, forestry and recreation.

CONNECTING THE WEST

- PacifiCorp’s Energy Gateway transmission expansion project is the largest of its kind in the U.S. The \$12 billion investment totals 2,300 miles, provides access to the West’s abundant and diverse energy resources, and is the foundation for a more resilient and reliable Western grid.

> CONTINUED ON BACK

- PacifiCorp was a founding partner in the Western Energy Imbalance Market that has saved customers across the West over \$4.7 billion. The market has saved PacifiCorp customers over \$695 million while simultaneously reducing greenhouse gas emissions and improving reliability during extreme weather events.
- To magnify the benefits of market collaboration, PacifiCorp is planning to join the Extended Day-Ahead Market as a next step in its commitment to delivering low-cost, reliable, clean power.

WILDFIRE MITIGATION AND EXTREME WEATHER RESILIENCE

- Since 2019, PacifiCorp has invested over \$500 million in system hardening and advanced technologies to mitigate wildfire risk and extreme weather impacts and plans to invest another \$1 billion between 2024 and 2026.
 - The company has installed a network of over 450 weather stations, growing to 640 by 2026, across six states that provide continuous real-time information to a team of seven internal meteorologists. These experts employ a custom 30-year weather research and forecast model to provide weather and fire risk forecasts across 1.5 million square miles.
 - PacifiCorp has installed over 400 advanced relay and recloser devices through 2023 and plans to install another 300 devices by 2026. These devices support elevated fire risk settings for rapid fault detection and isolation.
 - The company has completed a rebuild of 500 miles of overhead covered conductor and underground lines through 2023 and plans to rebuild an additional 1,000 miles of lines by 2026.
 - PacifiCorp has received grant awards of \$150 million from U.S. Department of Energy that will be matched dollar for dollar by the company for a total of \$300 million in wildfire mitigation and smart grid technology investments in areas that primarily serve disadvantaged communities in its service areas.
- PacifiCorp has enhanced vegetation management in transmission and distribution right-of-ways, including annual inspections in high fire risk areas and hazard tree removal.
- An expanded in-house emergency management team coordinates PacifiCorp’s emergency operations center with external first response agencies during extreme weather events.
